

## Diamond Density Setting *by Janice Henning*

Decorative satin stitches can have the density changed to make the stitching fuller.

Bring up the stitch on the screen.

Notice that you have the stitch length and the stitch width and an icon that says “alt”. If you touch the stitch length PLUS , the design becomes bigger but you may not be happy with the density.

If you touch the ALT, a red circle surrounds it and now you have the density adjustment. Notice the “stitch length icon has been replaced. Touching the Plus will make the stitches further apart and touch the minus will make them closer together as the picture shows.
