

Downloaded Designs going to Temp file

If your downloaded files have gone into a temporary file, you may have accidentally unchecked the "confirm download box".

Right click on "start" and click on "**explore**".
Click on "**Tools and then** "**Folder Options**".

Click on **File Types** - scroll all the way down to the WinZip file.

The folder underneath is the "explorer". Then I clicked on "tools/folder options" to see the "file types" window. In that window, scroll down to see the 3 different Win Zip files. I click on the bottom one and click on "**advanced**".

The right side shows the "advanced" window called "**edit file type**".

Put a check in the box next to "**Confirm Open after Download**".
Then click on **Ok** and maybe Ok again to get out of this.

Look in my tips for "Downloading Designs".
