

## External floppy drive to use SHV disks on the Designer SE

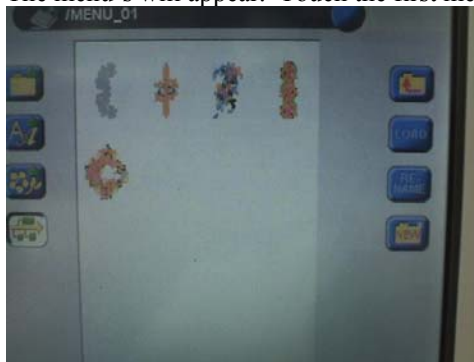

Many people have written and asked if they could use the external floppy drive on the Designer SE to access the disks they created with Disk Manager in SHV format. Yes, you can do that.

Plug the external floppy drive into the port on the machine or plug it into the hub you might have. Insert the disk.

Touch on the **“File Manager”** and touch the **“device”** icon and you will see the floppy drive icon and touch it and touch **“open”**.

The menu's will appear. Touch the first menu and **“open”** and the designs in that menu will appear.

Touch the design you want and touch **“load”**.
