

Editing Santa Design by Janice Henning

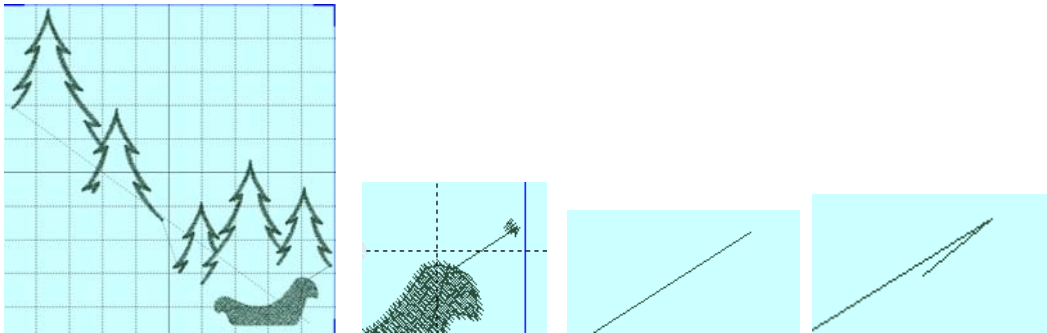

The trees and the sled in this design are both green. The owner wanted the trees to be white.

Bring the design up on the screen and click on “edit” tab. Under “modify”, move the top slider to the right

until you see only the last few stitches of the trees.

Zoom in on that area and use the right arrow on that slider bar to hide the stitches until you only see the straight line.

Touch the left pointing arrow on that slider bar one time to bring back the last stitch.

Click on the “insert color change” Click on the bottom of that stitch and a “color selection” box will appear. Choose the same color green as #7. You can just type it in. The trees will be one green color and the sled will have it’s own color bar.

Click on the “design” tab and click on “zoom to fit” And change color #7 to White.

Save with a slightly new name to show you edited this one.
